

# The secret...

...to becoming a 10x programmer

[fixitfast.pro](https://fixitfast.pro)

...it's not strongly typed  
languages...

...it's not functional  
programming...

...it's not micro-services...

...it is...

...pick your battles

There was a saying, in the early  
days of Ruby on Rails...

"if it's hard to do, you're doing  
it wrong"

Use the right tool for the job...

...say no to projects that aren't  
a good fit...

...don't work for clients who tell  
you what to do...

...work for clients who know  
what they are looking for...

...and allow you to plot the  
simplest way there...

...because *you are the expert*...

...but you can't solve  
everything...

...at least not quickly...

...SO pick your battles
